Technical Skills

- **Frontend:** React, Typescript/Javascript, Webpack, Gulp, SCSS/CSS, Material UI, and Hugo
- **Backend:** Node, Express, Python, SQL, NoSQL, Java, Common Lisp, and C++
- **Other:** Git, Bash/Unix, NPM, Yarn, Jira, Agile, Scrum, and CI/CD

Professional Experience

Senior Software Engineer & SE II at Author by Humana - Boston, MA May 2020 - Current

- Core developer on the Consumer Experience team responsible for creating authorbyhumana.com and our member dashboard, my.authorbyhumana.com, built with Typescript and React.
- Built sites from scratch to full-fledged enterprise applications that now has over 1000 active members.
- Primary reviewer on all team pull/merge requests responsible for maintaining code quality.
- Developed the team's React components library, which uses Storybook for documentation. Storybook has helped me align with the Design team at the component level.
- Mentoring other developers on the team, with our frontend technologies and CI/CD.
- Enhanced the team's jest tests with utility functions to prevent pipeline timeouts and update fixes, as I have kept each of our node packages up to date since last summer.
- Automated environment deployments in Gitlab (saves 30 minutes per day).
- Making team leadership decision such as which CMS vendor to integrate with and how to interview new candidates.
- Integrated our projects on Gitlab with Jira, Microsoft Teams, and Artifactory.

Software Developer at Humana - Louisville, KY May 2019 - May 2020

- As team lead on my intern team, I helped develop a CRUD app for Humana architects to collaborate on project estimations.
- This saved the architects one hour per day and reduced the chance for error when estimating.
- With my second team at Humana, I refactored and enhanced a Vue/.Net dashboard that serves as a real-time incident report tracker.

Software Developer at 2Is inc. - Walpole, MA May 2018 - Aug 2018

- Used Test Driven Development technique to develop an SAP Interface with Northrop Grumman. Worked overtime to complete this project at the end of the summer.
- Started my summer internship by learning Common lisp through refactoring legacy code and developing all new unit tests for the company.
- Researched and demo'd new web frameworks for the team to adopt.

Frontend Developer at Getfused - Boston, MA May 2017 - Aug 2017

- Made sites for Boston area businesses and projects, like the Wynn Casino road construction project.
- Learned the importance of caring for CSS and reusable components.
- As an intern, I was working in the same capacity as every other frontend developer at Getfused after my first month of getting up to speed.

Education

Michigan State University - East Lansing, MI

Sept 2016 - May 2020

B.S. in Computer Science & Minor in Entrepreneurship and Innovation

Eleface - Elephant Preservation App

- Led a team of developers to develop an application to help protect and save elephants in South Africa from poachers. [Read more from Evolutio here.](#)
- Won the Urban Science Sigma Award for having the best Capstone experience.
- As the lone developer on the team with web experience, my responsibilities included creating a Python Flask API and a Vue dashboard for our Elephant tracking and recognition system.
- Our application supported video image processing and GPS coordinate predictions so that the rangers in South Africa can track their elephants without obstructive or expensive equipment.

Open Source Work

- Created [sprt.dev](#), a terminal friendly web application for viewing your favorite pro sport schedules with ease using Node JS/Express, Heroku, and Github Actions. [See code here.](#)
- Fixed an accessibility bug for Material UI to help their Autocomplete component meet WCAG standards.
- Made 3 Hugo themes and 7 sites using Hugo - the world's fastest framework for building websites.
- Used Nunjucks, a rich and powerful templating language for Javascript, to build [my mother's small business site.](#)

Side Projects

- Made [a python script](#) for re-naming and re-dating image files for family photos. They are now all on Google Photos for my Mom, Grandma, and myself to view at any time!
- My friend needed a way to automatically screenshot all pages of a website, so I built [this python script](#) for him to automate the process.
- Created a personal repository to store my favorite configurations/dotfiles [here.](#)
- Wrote an article/tutorial about my favorite tech stack for small static sites: [click here to see the article](#)

Hobbies

- I have a 10 month old portuguese water dog named Gus, so he and I have fun walking while I am taking a break from work. You can see a picture of him [here](#) (pro tip: there is a different picture shown as the background for the mobile sized breakpoint).
- Growing up, I was unable to ever experience fresh bakery goods due to the potential cross contamination with nuts. After trying fresh baked bread from a friend's dutch oven in the winter of 2019, bread baking and pizza making has become a new hobby and passion for me.
- I have skied since I was 3 years old. It's nice when the east coast weather graces us with snow on top of the perpetual ice.
